Docker

Tech rules (example)

- Log rotate
- Resourse limit
- Dedicate volume for directory /var on host
- Dedicated user
- Backup
  - Use CI/CD
  - Use GIT
- Added to DRP
  - Without backup - point of failure
- Added to DRP
  - Without backup - single point of failure

Policy IT/IS

- Documentation
- Secret managment
  - Passwords rotate
  - Secure passwords
- Service for check securability package/library
- Update and security patch
- Requirement to create base image for standard list OS
- Centralized collecting logs
- Infrastructure for tested (build/deploy)
- Periodically scan images
  - Auto scanning
    - OpenSCAP
    - Trivy
  - Dedicated starage for images
- Regular executing offensive security
- License policy (included open software)
- Backup plan
  - Included risks of security
  - Periodically check backup working
- Global developing plan IT/IS
- DRP

Design engineering

- Documentation
  - Dockerfile
  - Docker-compose
  - File of app/service for container
- Test/Prod IT/IS policy
- Dedicated user
- Rootless (docker host with other namespace)
- Orchestration
  - Clustering
  - Scaling
  - Secret managment
  - Ingress access
- Non-cluster nodes orchestration
  - Portainer
  - Dozzle
  - Komodo
- Cycles update and security patch
- Added all packet/library to local repository
- Service not reasonability run on docker

Reasonability

- Complexity service
- Skills of staff
- Technical restriction
  - Usage socket
  - Required too most access
- Development trajectory/plans for subsequent periods

Build image

- Documentation
- Centralized collecting logs
- Use nocache option
- Context build from compose
- External package/library dependency

Monitoring/Service Desk

- Metrics for docker host
- Standard metric for working application/service
- Appear changes in runtime
  - Integrity check
- logs and telemetry from application for observability

Deploy container

- Documentation
- Integrity check
  - Images pins
- Time to market (timer to deploy)
- Deploy for production
- Periodically backup data
